ASSESSMENT (05-10-26)

Topic Name: Structuring a basic Python conversational loop

TASK :

Build a simple rule-based conversational chatbot in Python. Your chatbot must interact continuously with the user, recognize different messages, provide appropriate responses, and allow the user to exit.

CODE:

```
{1} 1m ▶ name = input("What is your name: ").lower().strip()

while True:

    message = input("You: ").lower().strip()

    if "exit" in message or "bye" in message:

        print(f"Bye {name}")
        break

    elif "hello" in message or "hi" in message:

        print(f"Hey there {name}")

    elif "joke" in message:

        print("That's great. Take a spoon and fill it with water.")
        print("Then jump into that 🤪")

    elif "how are you" in message:

        print(f"Thanks for asking....❤️ How are you Mr. {name}?")

    else:

        print("Sorry I can't hear you. Try with another message")
```

OUTPUT:

```
What is your name: Nalluri Chanikya
You: How are you
Thanks for asking....❤️ How are you Mr. nalluri chanikya?
You: Tell me a joke
That's great. Take a spoon and fill it with water.
Then jump into that 🤪
You: how you know about me
Sorry I can't hear you. Try with another message
You: bye
Bye nalluri chanikya
```
